Art Unit: 3683

1. Claims 1-30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is indefinite in the recitation of "applying brake-steer", which is confusing. Braking or steering is applied. There is no brake-steer. In addition, there is no "brake-steer" signal. There are braking and steering signals. The phrase "to enhance brake-steer" is confusing. The term "enhance" is non-limiting. Claims 2- 16 are indefinite due to their dependency on claim 1. Claim 17 is indefinite in the recitation "to determine a brake-steer condition", which is confusing as only braking and steering conditions are determined. Also, it is unclear as to how the suspension component reduces the turning radius. The steering device or brake controller or drive controller reduces the turning radius. Claims 18-30 are indefinite due to their dependency on claim 17.

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Chen et al., Hac et al. and Ghoneim et al, show steering control in vehicle stability control systems utilizing a suspension control signal.
